

Travel Agency B2B Platform System Requirements Document

This document defines the complete system requirements for a B2B Travel Agency Platform. The document has been cleaned and prepared for development purposes only. All company branding, contacts, commercial terms, payment plans, and legal sections were removed.

1. Project Overview

The platform is a web-based B2B hotel booking and management system designed for business clients. The system allows companies to search hotels, make reservations, manage bookings, use credit balances, and process online payments through integrated third-party APIs.

2. Main System Components

- Client Website
 - Admin Panel
 - Booking Management System
 - Credit & Wallet System
 - Payment System
 - Notification System
 - CMS Management
 - Reports & Analytics
 - API Integrations
-

3. Client Website Features

Authentication & Account Management

- Registration
- Login / Logout
- Password reset

- Session management

Dashboard

- Credit balance
- Booking statistics
- Recent activity
- Quick actions

Hotel Search

- Search by destination
- Check-in / Check-out dates
- Guest & room selection
- Real-time hotel API integration

Filters & Sorting

- Price range
- Star rating
- Amenities
- Room types
- Sorting by price/rating/popularity

Hotel Details

- Hotel photos
- Room pricing
- Amenities
- Policies
- Google Maps integration

Booking & Checkout

- Booking summary
- Guest details
- Online payment
- Credit payment
- Booking confirmation PDF voucher

Booking Management

- View bookings
- Search/filter bookings
- Cancel bookings
- Download vouchers

Wallet & Credit System

- Credit balance
- Credit usage history
- Outstanding balances

Notifications

- Booking alerts
 - Payment alerts
 - Credit alerts
 - Outstanding reminders
-

4. Admin Panel Features

Admin Dashboard

- Total clients
- Total bookings
- Revenue overview
- Outstanding balances

Client Management

- Manage business accounts
- Activate/deactivate users
- Edit company profiles

Credit Management

- Assign credit limits
- Top-up balances
- Settlement tracking
- Outstanding management

Booking Management

- View all bookings
- Update booking status
- Download vouchers

Reports & Analytics

- Revenue reports
- Booking reports
- Credit reports
- Export reports

CMS Management

- Static pages
- Homepage banners
- Promotional content

Sub-Admin Management

- Roles & permissions
- Add/edit/delete admins

Support System

- Support tickets
- Query management

API Management

- Hotel API settings
- Payment gateway settings
- Google Maps settings

5. Technology Stack

- Frontend: Angular
- Backend: NodeJS

- Database: MongoDB
 - Architecture: MEAN Stack
 - Cloud Infrastructure: AWS
 - APIs: Hotel Booking APIs, Payment Gateway APIs, Google Maps APIs
-

6. Security Requirements

- SSL encryption
 - Secure APIs
 - Session protection
 - DDOS protection
 - User permission management
 - Backend security hardening
-

7. Performance & Quality

- Functional testing
 - Regression testing
 - UAT testing
 - Security testing
 - Scalable architecture
 - Optimized performance
-

8. Required Deliverables From Development Team

UI/UX

- Full UI/UX designs
- Editable source files

Frontend Development

- Responsive client website
- Responsive admin panel

Backend Development

- Full backend APIs
- Authentication system
- Booking system
- Credit & wallet system
- Notifications system

Integrations

- Hotel booking APIs
- Payment gateway integration
- Google Maps integration
- Email & SMS integrations

Database

- Database architecture
- Database schema

Testing

- QA testing
- Performance testing
- Security testing
- Bug fixing

Deployment

- Production deployment
- AWS setup
- SSL setup

Final Delivery

- Full source code
- Deployment files
- Technical documentation
- Production-ready platform
